Independent Centres for Skin Cancer Screening
Looking after your skin. Reassuring your mind.

MOLE Clinic™ COMPANY SCHEMES

'At Prudential, we know that looking after our employees when they fall ill is only half the healthcare story. If we can help our people stay well too, everyone benefits. That is why we have offered skin cancer screening by The MOLE Clinic to our 6,500 employees throughout the UK. The response from staff was fantastic.'

Alison Meale, People Policy Manager, Prudential PLC

Peace of mind for employees

The MOLE Clinic™ can screen employees for skin cancer with a company MOLECheck™ scheme. This offers an employee benefit that can't be beaten – peace of mind.

According to recent Cancer Research UK statistics, melanoma – the most serious form of skin cancer – is the second most common cancer in the 20 – 39 age group. Each of us now faces a one in ten chance of developing a skin cancer during our lives.

If an employer is committed to looking after the health of its employees, why not give them peace of mind against the sun's harmful rays with a top to toe skin screen by an expert?

With our MOLECheck™, typical moles are confirmed as such, avoiding unnecessary removal. Melanomas are diagnosed much earlier – dramatically increasing survival rates and proving that prevention really can save lives.

Peace of mind for employers

Choosing a provider of clinical services to look after the health of employees is a big responsibility. For skin cancer screening, The MOLE Clinic is the only provider to offer:

- 100% NICE compliant systems and audit trail
- Fully insured Screening Nurses
- London based clinic for after screen services
- A track record of 15,000 successful screens, and
- BUPA Approval.

Comprehensive service

Our exciting new on-site service uses the latest proven detection technology and advanced digital imaging. Up to 22 employees can be screened on-site per day per Screening Nurse. By providing our service as part of an employee benefits package, staff receive:

- 15-minute head to toe skin cancer screening by a qualified expert
- reliable results using the latest digital dermoscopic technology
- verbal assessment on the day
- detailed written report within three days, including risks, findings and referral information (to PMI, GP or NHS) if necessary.

The service also offers businesses valuable Management Information Reports, including usage data and risk profile reports at the conclusion of the campaign.

Tailored campaigns

A skin cancer screening campaign can be individually tailored to specific company requirements. Campaigns can be funded on a company pay or employee pay basis and budgets can be controlled by limiting numbers to a 'first come, first served' booking basis if required.

Daily rates are available on request.

Bookings may be made directly with The MOLE Clinic or with a Company's existing BUPA Wellness Account Manager.
